Somfy TaHoma:
Design your life just the way you want it.
Automate your home for extra comfort, convenience and energy savings.

somfy[®]

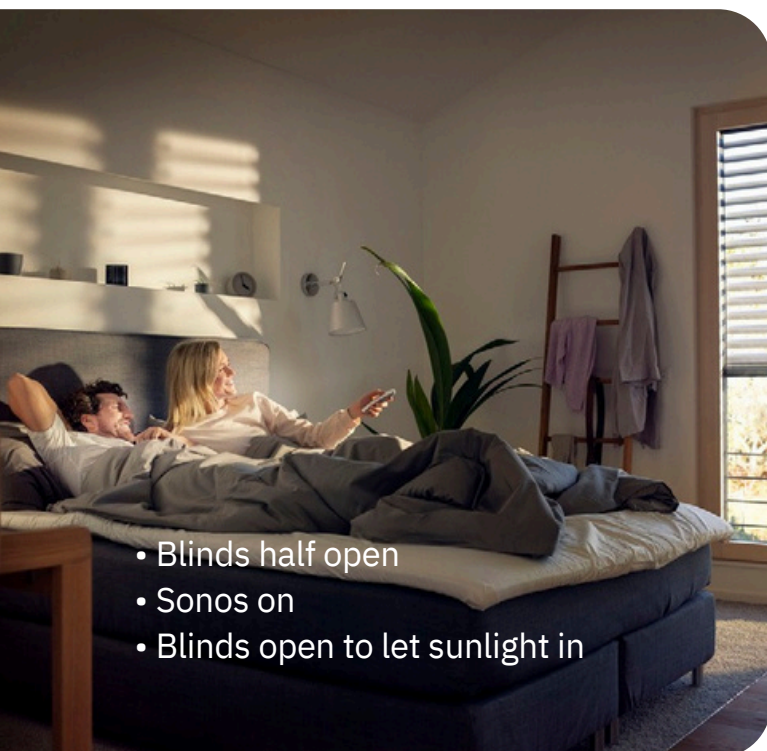

The benefits of automated blinds with Somfy TaHoma

This is how easy it is to add comfort, convenience and security to your home

Motorised blinds or curtains add extra comfort to your home. At the touch of a button, you can enjoy coolness, privacy or more comfortable light. But did you know that by adding Somfy TaHoma, you can improve your home and your life even more? With TaHoma switch, you are not only able to optimise and remotely control your blinds (whether you're in the room, at work or in another country, via smartphone, tablet or voice control), but you can also make other devices in the home collaborate 'smartly' and have them respond better to their surroundings.

With Somfy TaHoma, it is easier and safer than ever to make the move towards a smart home. Buying and installing a Somfy smart home system is an investment you will enjoy for many years to come. Complete control over your home every day, effortlessly. Control and program blinds, curtains, lighting, electrical appliances, heating, garage doors

and gates via your smartphone or tablet, adding comfort and convenience to your home. Somfy TaHoma works with nearly 300 different devices from Somfy and partners such as Philips hue, Velux, Sonos, Netatmo, Google Assistant, Amazon Alexa and Apple HomeKit voice assistants. Together with our partners, Somfy makes your life even easier.

- Blinds half open
- Sonos on
- Blinds open to let sunlight in

“Being woken up with soft light makes getting up so much easier. My morning playlist starts playing and all the blinds in the house are open by the time I’m ready for my first coffee.”

With the morning scene, mornings are just easier: wake up to soft sunlight, open blinds at a fixed time of day (a bit later at the weekend, of course) and with the right music, you start your day happily.

ACMEblinds

- Lights off
- Alarm on
- Devices off
- Camera on

“When I leave home, I always worry about forgetting something. Having everything taken care of automatically is a comforting idea!”

Leaving home without any worries: lights off, heating low, music off and alarm and cameras on. All via one single voice command!

“It feels welcoming and safe when my garage door opens as soon as I drive up. It makes me feel instantly at home.”

Arriving home safe and easy: the alarm switches off, the garage door opens and the light switches on.

- Alarm off
- Garage door open
- Light on

- Heating on
- Ambient lighting activated
- Terrace awning extends
- Control via smartphone

“Our terrace has become an integral part of our home, and our friends now only want to meet on our terrace.”

Add a living space to your home: awnings extend, lighting creates the right atmosphere and when it gets colder, the patio heater comes on.

All devices in the house do what you want, when you want them to

—
And you can save up to 10% on your energy bill as well

With TaHoma switch and the smart TaHoma app, you control devices in and around your home effortlessly. But besides convenience and comfort, Somfy TaHoma offers numerous other possibilities.

Lower energy bills, more comfort at home

Recent studies show that by automating your blinds, you can save up to 10% on your energy bills* by opening or closing blinds or window coverings at the right times. Set the devices in your home to save energy by having blinds or shutters respond to weather conditions. For example, have blinds automatically close when the temperature rises above a preset temperature. That way, you spend less money cooling or heating your home. Or use TaHoma to set your thermostatic radiator valve to lower when you are sleeping or away. Even one degree lower can already save you money!

As extensive or simple as you like

Somfy solutions are scalable and can be gradually expanded as your personal situation or your lifestyle changes over the years. Start with a TaHoma switch and add a few smart plugs to make your non-smart appliances (such as lamps, coffee maker, microwave oven, etc.) in the house smart, without any effort.

At last, someone does exactly what you ask, wherever you are

You can fully customise your Somfy smart home system to your personal preferences, make it as simple or extensive as you like, and you can monitor and control it from anywhere in the world. Somfy TaHoma works with nearly 300 different devices from Somfy and partners such as Philips hue, Velux, Sonos, Netatmo, Google Assistant, Amazon Alexa and Apple HomeKit voice assistants.

Somfy smart home solutions are easy to use and easy to install.

A smart automated home

Somfy TaHoma is an easy-to-use and scalable solution for smart homes. The smart system provides a central point of control for all smart devices in the home, with a simple push of a button or via the app. TaHoma® switch is compatible with Google Assistant, Amazon Alexa and Apple Homekit, extending the user experience to voice control.

Somfy TaHoma switch

With the TaHoma® switch smart control, you easily control all the important appliances in your home. This smart system supports over 300 different products from Somfy and partners. Control blinds, shutters, doors, gates, windows, heating, lighting, cameras and alarm systems via one single system. For greater security, energy efficiency and comfort.

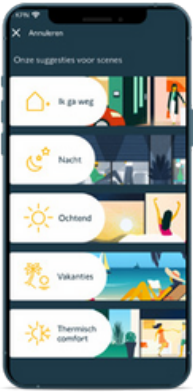

Control via the TaHoma app

TaHoma® switch has a comprehensive app that makes controlling and monitoring your smart home easy. Quick access to your favourites, easy management of installed devices and clear interfaces make a smart home easier than ever before. New products are effortlessly added directly to the app. Receive notifications when something happens, link your account to external services and experience the benefits of voice control.

Scenes for ultimate convenience

Use TaHoma to easily control your smart home with the app on your smartphone or on your tablet. Or make use of convenient scenes with TaHoma. Scenes allow you to automate specific actions in your home. There are different types of scenes in TaHoma:

A manual scene is activated when you press a button, wall control or TaHoma switch. For example, you can set the light to go on and the curtains to close when you press the wall button.

How to create a manual scene in the TaHoma® app Scan the QR code

A scheduled scene is activated at a set time or linked to dawn or dusk. For example, the blinds go down at 3 o'clock or the lights in the living room come on at 7.

How to create a planned scene in the TaHoma® app Scan the QR code

An advanced scene is activated when, for example, a sensor detects something. For instance, add a motion sensor that turns on the lights and opens a blind when it detects movement after dusk, to deter potential burglars.

How to create an advanced scene in the TaHoma® app Scan the QR code

A preset scene offers pre-programmed actions that depend on your devices, the season or the time of day. The thermal comfort scene in the TaHoma app, for example, can make indoor and outdoor blinds respond to outdoor conditions. As soon as the temperature at home gets too high, your blinds automatically close and your home stays cool.

So many reasons to choose Somfy TaHoma

Besides peace of mind with our reliable Somfy quality, our TaHoma-enabled solutions offer plenty of additional benefits:

1. Save up to 10% on your energy bill
2. Maintain a comfortable temperature at home
3. Control via TaHoma switch, smartphone, hand or wall transmitter or voice assistant, individually or in groups
4. Easy to install
5. Easy to expand with more devices
6. All your devices controlled at the touch of a button
7. With presence simulation, your home is always safe

Save energy at home with Somfy TaHoma's smart scenes

Keep cool in summer - and stay comfortably warm in winter

Save energy by letting your motorised blinds work for you. With sun and temperature sensors*, blinds can close automatically when there is abundant sunlight or when it is too hot, so your home is always comfortable and cool without having to turn on air conditioning**. In winter, you can set the blinds to raise when the sun shines outside, so the sunlight can heat up your home. As soon as the sun goes down, the blinds close again, keeping the heat inside. This way, you can save up to 10% on your energy bill. How is that for comfort?

A lower energy bill – save money every month

Monitor your energy consumption with smart plugs to optimise energy use and save on your monthly energy bill. Only use energy in rooms that are used and avoid heating the whole house - you can control the heating and temperature by installing thermostatic valves on your radiators and easily control the heating via your TaHoma app. Not just very easy, also better for the environment.

* Sunteis sun and temperature sensor (2-in-1) will be available in 2025.

** Amy io will be available in 2025.

This **Summer & Winter scene** includes the following products:

- Somfy Smart Plug (io or Zigbee)
- Somfy Thermostatic Radiator Valve

Always keep your home and family safe, wherever you are

Peace of mind when you are on holiday

When you are away for longer periods of time, for example on a family holiday, it is nice to know that your home is safe. With the presence simulation function, you can set the lights to come on at different times to suggest presence in the house during your absence. And with motion detectors, for example, as soon as movement is detected in the garden at night, you can set a light to come on and a blind to open to deter unwanted visitors. In addition, you can check and adjust the status of your home anytime, anywhere via your smartphone. Providing you with a sense of security and peace of mind as well. Holidays will be more relaxed than ever!

Home sweet home: safety first

With Somfy TaHoma 3.0, you can set the devices in your home to respond in case of smoke or fire danger. In case of a fire alarm, you can set to receive an instant notification via the app. You can also connect other home devices for additional security, for example connect smart lighting solutions (such as Philips Hue and Somfy Dim light receiver) and a Somfy io smoke detector to have lights and shutters respond to the situation in your home. You can set up to receive a notification on your phone if the motion sensor detects suspicious activity around your home. Presence simulation makes it look like people are at home at all times, deterring potential intruders.

Here's how Somfy TaHoma can make your life easier and more comfortable

Wake up relaxed every morning

Start the 'Good Morning' scene at the press of a button and wake up your home: the (roller)blinds (half) open, the lighting adjusts so you can wake up at your own pace, your Easy Morning playlist starts playing at low volume and the connected coffee machine starts simmering. No better way to wake up!

All set when going out

When you're on your way to an important appointment or an exciting date, it's good to know you can fully focus on the event at hand. With the 'Leaving' scene in TaHoma, you can set appliances such as coffee maker, lights and music system to turn off automatically or by voice command when you leave, and the alarm system to turn on. All you need to do is shut the door behind you when you leave home.

This **Good morning scene** includes the following products:

TaHoma switch + TaHoma by Somfy app + Roller shutters or Roller blinds + Somfy Smart Plug (io or Zigbee) + Lighting (IZYMO™ Lighting Receiver io)

SONOS Works with Apple HomeKit works with Hey Google WORKS WITH alexa Voice assistant

Welcome home any time of the day (and night)

Connect devices to easily and securely access your home. Give a voice command* from your car via your phone so that the gate or garage opens as soon as you come within a certain range of the house, for example. The lights in the house automatically turn on**, the alarm switches off and the gate opens, without even having to get out of the car. So convenient!

* Voice assistants need a security code (PIN) to verify it is you. This code is set when the device is configured initially. Follow the instructions of your chosen voice assistant.

** Motion detector: To make sure the lights turn on or off as you require, it is recommended to set an advanced scene in the TaHoma app: If there is motion, the light should be switched on. If there is no movement, the light should be switched off.

Quality time with your family

Fully enjoy your connected home by adding your audio (sound) system, smart TV, blinds, dim light receivers and curtains. For an intimate family evening, all you need to do is pick a film and press the button for your Home cinema scenario. From your smartphone, you can adjust the sound, close the curtains and dim the lights.

Get more value from your terrace

If you have a terrace or patio at home, you obviously want to enjoy it as often as you can, for as long as possible. Relax on long, balmy summer evenings with friends or family. Or peacefully by yourself with a book, of course. Good to know you are no longer dependent on the weather: with a motorised pergola, you can be sure to stay comfortable and dry. At the first raindrop, just close the slats of the the roof and switch on the light with one click on your phone. Sit outside all night long, if you like!

TaHoma switch works with different protocols:

Voice assistant

Besides our own products, Somfy TaHoma works with more than 300 products from our partners:

So many advantages with Somfy TaHoma

Comfort

With Somfy TaHoma's innovative features, you are always assured of a comfortable home. Controlling connected devices is much easier, whether you choose a simple wall control, a remote control or control via the TaHoma app. With TaHoma, you have the added benefit of programmable scenes, control from any location and the option to connect your devices with other smart solutions in or around your home.

Reliability

Somfy has been providing reliable home comfort solutions for 50 years. Our TaHoma also includes comprehensive security features. TaHoma switch meets key features for IoT cyber security, such as secure updates and connections, protection of stored and transmitted data and maintenance of mobile application security.

Sustainability

Combined with TaHoma and sensors, your blinds can automatically respond to changes in the surroundings. For example, your outdoor blinds can close when the sun is too bright in summer or open to let heat in during the colder months. The sensors automatically detect these changes and adjust your devices at the right time. This automation helps you save on cooling and heating, contributing to a more energy-efficient home.
